January 2022

Patient Care

7-tesla MRI finds lesions undetected with 3-tesla magnetic strength

Overlays of PET images and 7-tesla MRI can help identify candidates for surgery among the one-third of individuals with epilepsy who have medically refractory seizures.

Pain protocol avoids opioids after Chiari malformation surgery

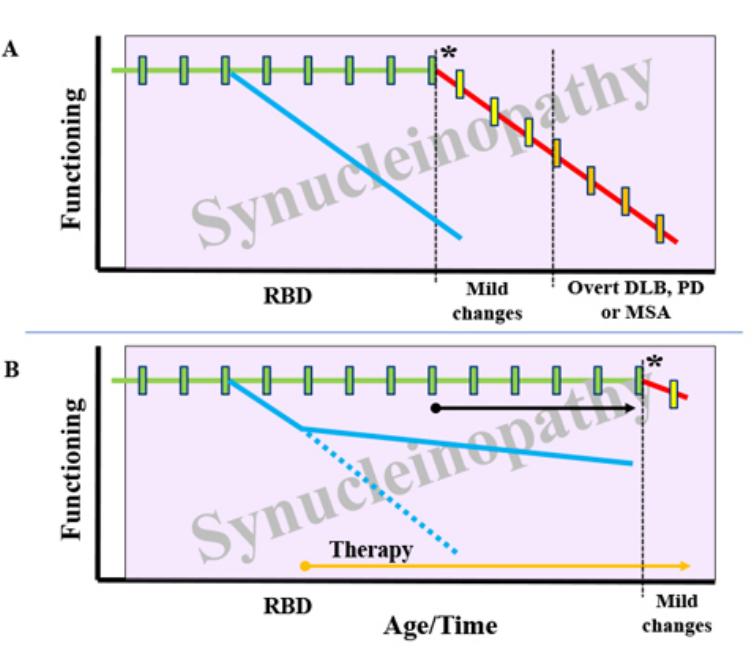

An intraoperative injection of liposomal bupivacaine can reduce opioid use in the first 24 hours after surgery. Following that period, Mayo Clinic uses nonopioid medications to aggressively treat pain.

Research

Study identifies biomarkers to help prevent synucleinopathies

Mayo Clinic is co-leading research to identify biomarkers for neurodegenerative diseases in people with REM sleep behavior disorder. The ultimate goal is clinical trials of therapies to delay or prevent synucleinopathies.
