

# Clinical Physician Update

November 2022

## Patient Care

### Expanding donor pool for pediatric heart transplants

At Mayo Clinic Children's Center, new protocols for induction immunosuppression as well as strategies to remove antibodies that could affect a donor heart help expand the pool for higher risk pediatric patients awaiting heart transplants.

### Hypertrophic cardiomyopathy surgery for pediatric patients

Hypertrophic cardiomyopathy (HCM) is the most common cause of sudden death in young people. About two-thirds of patients with HCM treated at Mayo Clinic each year are candidates for open-heart surgery when medical therapy fails.

### Weight and diabetes management before joint replacement surgery

Mayo Clinic's multidisciplinary team works to reduce the risk of postoperative infections in patients with underlying conditions — the most common being obesity and diabetes — who have hip or knee replacements.
