Patient Care

Bowel endometriosis: A challenge to detect and surgically excise

Patients with bowel endometriosis spend on average six years with symptoms before diagnosis. Detection and surgical excision of this disease are challenging, yet Mayo Clinic OB-GYN surgeons take it on.

Research

Ovarian tissue vitrification shows modest advantage over slow freezing

A Mayo Clinic research team found some superiority in ovarian tissue vitrification versus slow freezing due to stromal cell viability. The researchers call for a multicenter study to confirm these findings.

CT plus molecular subtyping predicts resectability of advanced-stage high-grade serous ovarian cancer

A pilot study assessing CT plus molecular subtyping provided useful information for patients and surgeons indicating which patients have low likelihood of successful disease resection.
